(54) Title: METHOD FOR MEMORY ALLOCATION FOR IMAGES

(57) Abstract: In a method for memory allocation for images, when storing data describing an image in operating memory (1), the image (10) is divided into lines, and each line is described by a separate subset of data from which at least one set of data is created, to which a free segment of operating memory (1) is assigned. The creation of sets of data is performed until data describing the whole image (10) is assigned to the sets of data, and when reading the image (10), consecutive lines are read from the operating memory (1), until the whole image (10) is read.
